INTEGRATIVE PROGRAMMING AND TECHNOLOGIES 1

Final Project

“Pokémon: The Pokédex – A CRUD-Based Web Application”

An Academic Project Submitted to

Professor Jed Malveda

Project Team

Bilog, Lhea L.

Lagundino, Cheska May A.

Tesorero, Reden S.

Summary

The Pokédex API is a CRUD-based web API developed using ASP.NET Core MVC and Entity Framework Core. The primary goal of this project is to simulate a digital Pokédex that allows users to Create, Read, Update, and Delete Pokémon entries. Each Pokémon record includes essential details such as Name, Type, HP, Attack, Defense, and a Description. The application uses SQL Server as its database system, with data managed through Entity Framework Core using proper migrations and seed data for initial content. The API follows the MVC architectural pattern, promoting a clean and organized codebase by separating logic into Models, DTO and Controllers. For project documentation, we are using Razor Pages, which serves as an in-app documentation interface, and for API documentation, we are using Swagger for testing and developer access.

Programming Languages and Software

The final project for Integrative Programming and Technologies 1 utilizes a combination of programming languages, frameworks, and software tools to build a functional and structured web application — a Pokédex API system that performs CRUD operations and stores data in a SQL Server database.

HyperText Markup Language (HTML)

HTML is the foundation of the website's structure. It is used to build the layout and content of Razor Pages, forming the skeleton of how data — such as Pokémon information — is presented to users. It ensures that text, tables, and forms are properly structured within the web pages.

Cascading Style Sheets (CSS)

CSS brings visual life to the web interface. It is used to style the Razor Pages, giving the Pokédex a polished and organized look. From coloring Pokémon type badges to arranging forms and buttons, CSS plays a crucial role in making the user experience both visually appealing and user-friendly.

C# (C-Sharp)

C# is the core programming language used to develop the business logic and API functionalities. It handles the data models, controller logic, database access, and routing. C# enables the system to process user input, communicate with the database, and manage the application's overall logic effectively.

Razor Pages

Razor is a syntax used in ASP.NET Core to combine HTML and C# in the same file. It is used for building dynamic web pages such as the documentation page, Pokémon listing pages, or forms for adding/editing entries. Razor helps bridge the gap between the frontend and backend by rendering dynamic content directly from the server.

This blend of technologies ensures that the Pokédex API is not only functional and reliable but also visually refined, interactive, and easy to navigate — simulating the experience of using a real-world digital Pokédex.

How to Use?

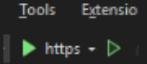

Setup Instructions

Prerequisites

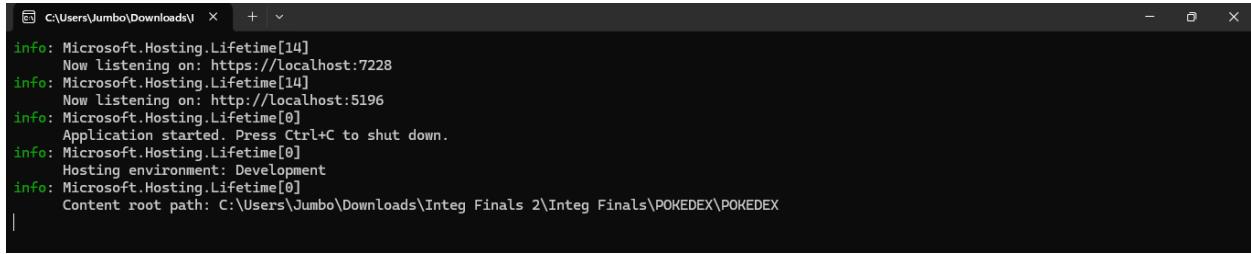

- Visual Studio 2022

Setup Steps:

1. Unzip and Open POKEDEX Folder: Click the POKEDEX.sln file and open it in Visual Studio 2022.
2. Open Tools > Nuget Package Manager > Package Manager Console: Type the following in Package Manager Console:

```
update-database
```
3. Run the project using the https button.
4. Access the Swagger UI and the Pokedex Website:
 - Swagger UI: <https://localhost:7228/swagger/index.html>
 - Pokedex Website: <https://localhost:7228/>

- When you run the project, it will direct here, just wait and it will automatically go to the Pokédex Website on your browser/chrome.

```
C:\Users\Jumbo\Downloads\ 
info: Microsoft.Hosting.Lifetime[14]
      Now listening on: https://localhost:7228
info: Microsoft.Hosting.Lifetime[14]
      Now listening on: http://localhost:5196
info: Microsoft.Hosting.Lifetime[0]
      Application started. Press Ctrl+C to shut down.
info: Microsoft.Hosting.Lifetime[0]
      Hosting environment: Development
info: Microsoft.Hosting.Lifetime[0]
      Content root path: C:\Users\Jumbo\Downloads\Integ Finals 2\Integ Finals\POKEDEX\POKEDEX
```

- Homepage

- About

- When you click the Pokémons, it will show all the Pokémon Lists.

LIST OF POKÉMON							
ID	NAME	TYPE	HP	ATK	DEF	ACTIONS	
#001	Bulbasaur	Grass / Poison	45	49	49		
#002	Charizard	Fire / Flying	78	84	78		
#003	Charmander	Fire	39	52	43		
#004	Dragalge	Poison / Dragon	65	75	90		
#005	Dragapult	Dragon / Ghost	88	120	75		
#006	Garchomp	Dragon / Ground	108	130	95		
#007	Pikachu	Electric	35	55	40		
#008	Lucario	Fighting / Steel	70	110	70		
#009	Gengar	Ghost / Poison	60	65	60		

- On the left side, you can Add New Pokémons in the List

Create Pokemon Details

Name	Dragapult
Type	Grass/Poison
HP	18
Attack	0
Defense	17
Description
Upload Image	<input type="button" value="Choose File"/> No file chosen <small>Recommended size: 300x300 pixels</small>
<input type="button" value="Create"/> <input type="button" value="Cancel"/>	

- On the right side, you can search Pokémon names

The screenshot shows a "LIST OF POKÉMON" interface. At the top left is a green "+ ADD NEW" button. To its right is a search bar containing the text "Snorlax" with a magnifying glass icon. Below the search bar is a table header row with columns: ID, NAME, TYPE, HP, ATK, DEF, and ACTIONS. A single data row is visible below the header, corresponding to Snorlax. The row contains the following information: ID #016, NAME Snorlax, TYPE Normal, HP 160, ATK 110, DEF 65, and two small blue and red buttons under the ACTIONS column.

- When you click the Blue with Eye Buttons in Actions, you can see the Details of Pokémons.

The screenshot shows a detailed Pokédex entry for Bulbasaur. At the top center is the name "Bulbasaur" and "#001". Below the name is a green and yellow illustration of Bulbasaur. Underneath the illustration are two buttons: "GRASS" and "POISON". Below these buttons is a bar chart showing Bulbasaur's stats: HP, Attack, and Defense. The chart has three colored bars: green for HP, blue for Attack, and yellow for Defense. At the bottom of the screen is a text box titled "Pokédex Entry". The entry describes Bulbasaur as the iconic Grass/Poison-type "Seed Pokémon" and the first Pokémon in the Kanto Pokédex (#001). It notes that Bulbasaur is known for its plant bulb on its back, which absorbs sunlight to grow stronger (thanks to its ability Chlorophyll). Bulbasaur is calm, loyal, and evolves into Ivysaur (at Lv. 16) and later Venusaur (at Lv. 36). At the very bottom of the screen are two buttons: a yellow "Edit" button with a pencil icon and a blue "Back to List" button with a left arrow icon.

- There's also Edit Button in the Details so that you can easily change/update records.

Edit Pokemon Details

Name	Bulbasaur
Type	Grass/Poison
HP	45
Attack	49
Defense	49
Description	Bulbasaur is the iconic Grass/Poison-type "Seed Pokémon" and the first Pokémon in the Kanto Pokédex (#001). Known for the plant bulb on its back, it absorbs sunlight to grow stronger (thanks to its ability Chlorophyll). Bulbasaur is calm, loyal, and evolves into Ivysaur (at Lv. 16) and later Venusaur (at Lv. 36).
Current Image	
Upload New Image	<input type="button" value="Choose File"/> No file chosen <small>Note: You need to Upload New Image!</small>
<input type="button" value="Save"/> <input type="button" value="Cancel"/>	

- The Delete Button, when you click that button, you can still see the details of Pokémons.

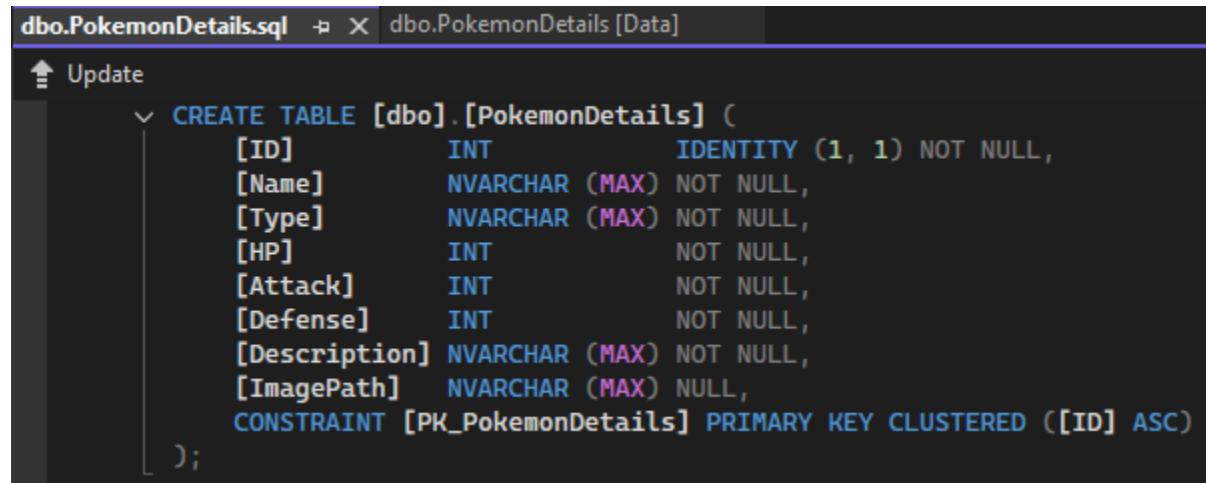

DELETE POKEMON

Are you sure you want to delete Bulbasaur?

	ID #001 Name Bulbasaur Type Grass/Poison Stats <table border="1"> <tbody> <tr> <td>HP: 45</td> </tr> <tr> <td>Attack: 49</td> </tr> <tr> <td>Defense: 49</td> </tr> </tbody> </table>	HP: 45	Attack: 49	Defense: 49
